

UK Heart Failure with Preserved Ejection Fraction Registry (UK HFpEF)

The aim of this study is to develop a large, deeply characterised cohort that will be a platform for collaborative clinical and translational HFpEF research, in order to improve the quality of life and outcome of patients with HFpEF.

Do you have a patient with HFpEF?

Explore how you may help patients with HFpEF improve their quality of life.

Eligible patients:

Diagnosis of HFpEF by a cardiologist with heart failure expertise, or a primary care physician with HF expertise, or a heart failure nurse.

Natriuretic peptide levels measured.

LV ejection fraction \geq 40%

Have a patient who meets the criteria?

If you have a patient who meets these criteria and may be interested in participating, please give them the Participant Information Sheet & Consent Form and with their permission pass their details to:
